# Rough Translation from Symantec

- 1. Does not have the right to distribute the product in any business or commercial purposes not connected with this sale.*
- 2. May not disassemble / study the binary code of the bot builder.*
- 3. Has no right to use the control panel as a means to control other bot nets or use it for any other purpose.*
- 4. Does not have the right to deliberately send any portion of the product to anti-virus companies and other such institutions.*
- 5. Commits to give the seller a fee for any update to the product that is not connected with errors in the work, as well as for adding additional functionality.*

These are typical restrictions that could be applied to any software product, legitimate or not. However, the most interesting part of the agreement is the section marked in red in the above screen shot:

*In cases of violations of the agreement and being detected, the client loses any technical support. Moreover, the binary code of your bot will be immediately sent to antivirus companies.*
